

## HEALTH ECONOMIST

### **The company**

HealThink is a dynamic research and consulting company with international experience in health technology assessment. We have developed successful health economic models, value dossiers and innovative market access strategies for pharmaceutical and other companies, and coordinated research projects for public and private organizations. Evolving in the fast-changing environment, understanding the needs of our clients and offering high quality customized services are the cornerstones of our strategy.

### **The opportunity**

Aligned with this strategy, we have decided to expand our capacity, and we are looking for self-motivated candidates seeking to advance their career and join our team. As part of our team, you will participate in HTA projects, the generation of evidence, the development of health economic models, and value dossiers' preparation.

### **Main Duties and Responsibilities**

- Support health technology assessment (HTA) projects for medicines, devices and other digital health technologies
- Health economic evidence review and identification of evidence gaps
- Apply quantitative and qualitative evidence review methods
- Support the adaptation or development of pharmacoeconomic models (budget impact, cost-effectiveness, etc.)
- Statistical modeling (logistic, ordinal, ordinary least squares, instrumental variable regressions, etc.)
- Support the preparation of value dossiers and market access submissions
- Monitor relevant health policy developments
- Support publication and scientific dissemination strategy

### **Required experience/ qualification/ skills**

- Relevant academic degree (preferably in economics, health economics, healthcare management or HTA)
- Good knowledge of econometrics and health economics methods
- Spreadsheet Proficiency with Microsoft Excel and/or R
- Excellent communication skills and good capabilities in writing advanced scientific texts

- Excellent verbal and written communication skills in English (and Greek)
- Teamwork skills
- Confidentiality

**Desirable experience/requirements**

- Experience in HTA projects
- Work experience in the healthcare sector
- Ability in conducting and communicating health economic projects and research
- Knowledge of predictive modeling and simulation techniques (Markov, Monte Carlo, DES, etc.)
- Experience in the healthcare/reimbursement environment and authority landscape
- Programming skills
- Project management

**Rewards**

- Professional development
- Friendly working environment
- Work/life balance

**Position:** Health Economist
