

JUNIOR MEDICAL ADVISOR

The company

HealThink is a dynamic research and consulting company with international experience in health technology assessment. We have developed successful health economic models, value dossiers and innovative market access strategies for pharmaceutical and other companies, and coordinated research projects for public and private organizations. Evolving in the fast-changing environment, understanding the needs of our clients and offering high quality customized services are the cornerstones of our strategy.

The opportunity

Aligned with this strategy, we have decided to expand our capacity, and we are looking for experienced and self-motivated candidates seeking to advance their career and join our team. As part of our team, you will participate in research and HTA projects, evidence generation, communication, and value dossiers' preparation.

Main Duties and Responsibilities

- Work as Medical Advisor on assigned products, diseases, and projects
- Provide guidance and training to other team members on the medical and scientific aspects of assigned projects
- Systematic quantitative and qualitative evidence review
- Undertake Medical Writing tasks (Protocol, CSR, Manuscripts, Presentations etc.)
- Contribute to the development of the clinical/pharmacological part of the value dossiers
- Collaborate with internal (project managers, biostatisticians, health economists, etc.) and external (pharma industry, KOLs, decision-makers etc.) stakeholders to ensure comprehensive analysis of clinical evidence
- Act as a medical expert within the company for assigned Therapeutic Area
- Assemble and manage key opinion leader interviews / advisory boards / congresses / workshops / training initiatives for HealThink and its customers

Required Skills & Experience

- Bachelor's degree in pharmacology, biology, biomedical or related life sciences discipline
- Teamwork skills

- Experience in evidence review, desk research and medical writing
- Excellent verbal and written communication skills in English (and Greek)
- Strong commitment to compliance with the relevant rules and procedures, and to scientific quality and integrity
- Ability to multitask and meet aggressive timelines/deadlines
- Excellent interpersonal and communication skills
- Confidentiality and consistency

Desired Skills & Experience

- Knowledge of market access, reimbursement pathways, regulatory requirements or pharmaceutical product management
- Knowledge of clinical research methods, tools and approaches, such as study designs, biostatistics, reference management, abstract/manuscript submission
- Project management skills and experience
- Ability to work both independently and in a team environment

Rewards

- Professional development
- Friendly working environment
- Work/life balance
